Community Pharmacy Minor Ailment Scheme

Staff Protocol

Author:	Richard Staniforth
Produced	November 2013
Review	March 2014

Section 1 Introduction

Pharmacy First – the Community Pharmacy Minor Ailment Scheme builds upon the expertise of community pharmacists in providing advice and treatment of a wide range of minor ailments.

The scheme will encourage all patients to consult pharmacy staff as a first point of call for a minor ailment. Without the need for a doctor's appointment, patients will be able to get advice and medicines for a defined list of minor ailments from many local pharmacies. Medication considered necessary for treatment will be provided free of charge for those patients who are exempt from prescription charges. Those who would usually pay for their prescriptions will still be encouraged to purchase their medication, as many of the treatments will cost less than the prescription charge.

Since many pharmacies are open in the evenings and on the weekends, patient access to health care services will be improved and as patients are diverted, capacity to deal with more complex patient cases will increase in General Medical Practice.

The provision of a minor ailment service from community pharmacies will:

- Encourage patient ability to self-treat minor ailments
- Support the use of the pharmacy as a first point of call for health advice
- Make more use of pharmacist's professional skills.
- Improve access to treatment for patients.
- Benefit other parts of the healthcare service particularly General Practice, Accident and Emergency Departments and Out of Hours medical services.

This protocol is intended to help staff when they are recommending patients to use the Community Pharmacy Minor Ailments Service. It should be used in conjunction with a service information leaflet to enable patients to make an appropriate choice. It may also be linked to information about making an appointment with the most appropriate healthcare professional.

Section 2 Procedure

If a patient telephones or calls for advice, an appointment or a prescription, they will often describe their symptoms without prompting. If the symptoms are among those included in the minor ailments service, staff may explain that through Pharmacy First, the patient may obtain advice and treatment from a participating pharmacist, without having to wait for an appointment with a doctor.

Staff must ensure that the patient is aware that they have a choice.

For patients making contact by telephone

- If the patient telephones with a request for a routine appointment, the receptionist must avoid directly asking what the problem is.
- Using judgement, the member of staff may discern that the request is related to a minor ailment.
- If this is the case, the staff member could say to the patient: **"You may not be aware that there is a Minor Ailment Service operating in the area now. Patients may go to a participating pharmacy to receive advice and treatment rather than having to wait for an appointment. The ailments included in the service include…** [Athlete's foot, groin itch, vaginal thrush, threadworms, head lice, diarrhoea, cold sores, mouth ulcers, oral thrush and ear wax]. **Is your illness any of these or one which could be considered a minor ailment?"**
- If the patient says yes, the staff member may then ask if they would like to use Pharmacy First rather than make an appointment at the medical practice.

It is important to note that this choice should be left to the patient.

For patients making contact in person

- If the patient presents themselves in person, the staff member may use their judgement to discern that the request is related to a minor ailment.
- Staff should, inform the patient that there is a service in operation and that they can be directed to a local pharmacy for advice and treatment, rather than waiting for an appointment. Each patient should be given a leaflet explaining the service.
- The staff member could say to the patient: **"You may not be aware that there is a Minor Ailment Service operating in the area now. Patients may go to a participating pharmacy to receive advice and treatment rather than having to wait for an appointment. The ailments included in the service include…** [Athlete's foot, groin itch, vaginal thrush, threadworms, head lice, diarrhoea, cold sores, mouth ulcers, oral thrush and ear wax]. **Is your illness any of these or one which could be considered a minor ailment?"**
- If the patient says yes, the staff member may then ask if they would like to use Pharmacy First rather than make an appointment at the medical practice.

It is important to note that this choice should be left to the patient.

For all patients

- Patients are expected to attend the pharmacy in person. In the case of a child under 12 years of age a parent, guardian or carer must be in attendance, but the child being treated need not be present
- If a patient chooses not to take advantage of the service to have a consultation with a pharmacist then an appointment with the GP should be made in the normal way.
- Advise patients that they can use any of the pharmacies that are part of the service.
- After an appropriate assessment by the pharmacist, patients may receive advice only or advice and treatment.
- If medication is required, it will be supplied from the agreed formulary.
- People who pay for their prescriptions will receive advice and will be able to purchase the medicines they require.
- Patients who are exempt from prescription charges will receive the medicine they require to treat their minor ailment, free of charge.

Good practice points

- Following transfer onto the Service it is good practice to record this in the patient's notes or computer record. Appropriate READ codes are **8HHm** Referral to Minor Ailment Scheme or **XaKzf**.

Section 3 Conditions covered by the Minor Ailments Service

A complete list of the conditions covered and other details can be found at: www.barnsleyccg.nhs.uk it includes:

Allergies	Athlete's Foot	Cold Sores	Conjunctivitis	Constipation	Cough	Dermatitis
Diarrhoea	Earache	Ear wax	Haemorrhoids	Hay Fever	Headache	Head lice
Heartburn	Indigestion	Infant Colic	Mouth Ulcers	Nappy Rash	Nasal Congestion	Oral Thrush
Pain	Scabies	Sore Throat	Teething	Threadworms	Vaginal Thrush	Verrucae and Warts

Eligible patients will only be provided with medicines to manage the minor ailment if, in the professional opinion of the pharmacist, there is a current clinical need for the medication, and the medicine required is not contraindicated.

Section 4 Minor ailment consultation

During the consultation for the minor ailment the pharmacist will;

- Assess the patient's condition using a structured approach to responding to symptoms.
- Identify any concurrent medication or medical conditions, which may affect the treatment of the patient.
- Consider medication used and assess appropriateness of further supply.
- Provide advice on the management of the condition.
- Provide a relevant information leaflet.
- Provide medication from the formulary appropriate to the patient's condition.
- If a product is supplied, the pharmacist will ensure the supply is recorded on the PMR system.
- Complete the Minor Ailment Consultation Form

Section 5 Age Limits

The service is only available to patients aged over 3 months. However, not every medication listed on the service formulary is suitable for all patients. The service matches the over-the-counter licensed age ranges for the included medications.

The minimum age of a patient that can be treated under the Minor Ailment Service is 3 months, irrespective of whether or not the product license covers use in younger children. For some medicines, the minimum age limit is greater than 3 months.

Section 6 Inappropriate Referrals

If a GP has made a decision about the medicine a patient needs, then a prescription must be issued. A GP cannot write a prescription for one item and refer the patient to the Service for another named item. **Pharmacists will be expected to refer patients back to the surgery if they are inappropriately referred into the service.**

Section 7 Pharmacy Referral System

Should a patient present themselves at a participating pharmacy with symptoms requiring a more immediate consultation with their GP, a locally agreed method for urgent referral* may be instigated.

This may be

1. A locally agreed referral form;
2. Patient advised to telephone the surgery;
3. The pharmacist telephoning the surgery on the patient's behalf.

*** GP Practices and Pharmacies are encouraged to establish a local fast track referral system that suits their needs.**

Section 8 Promoting the Service

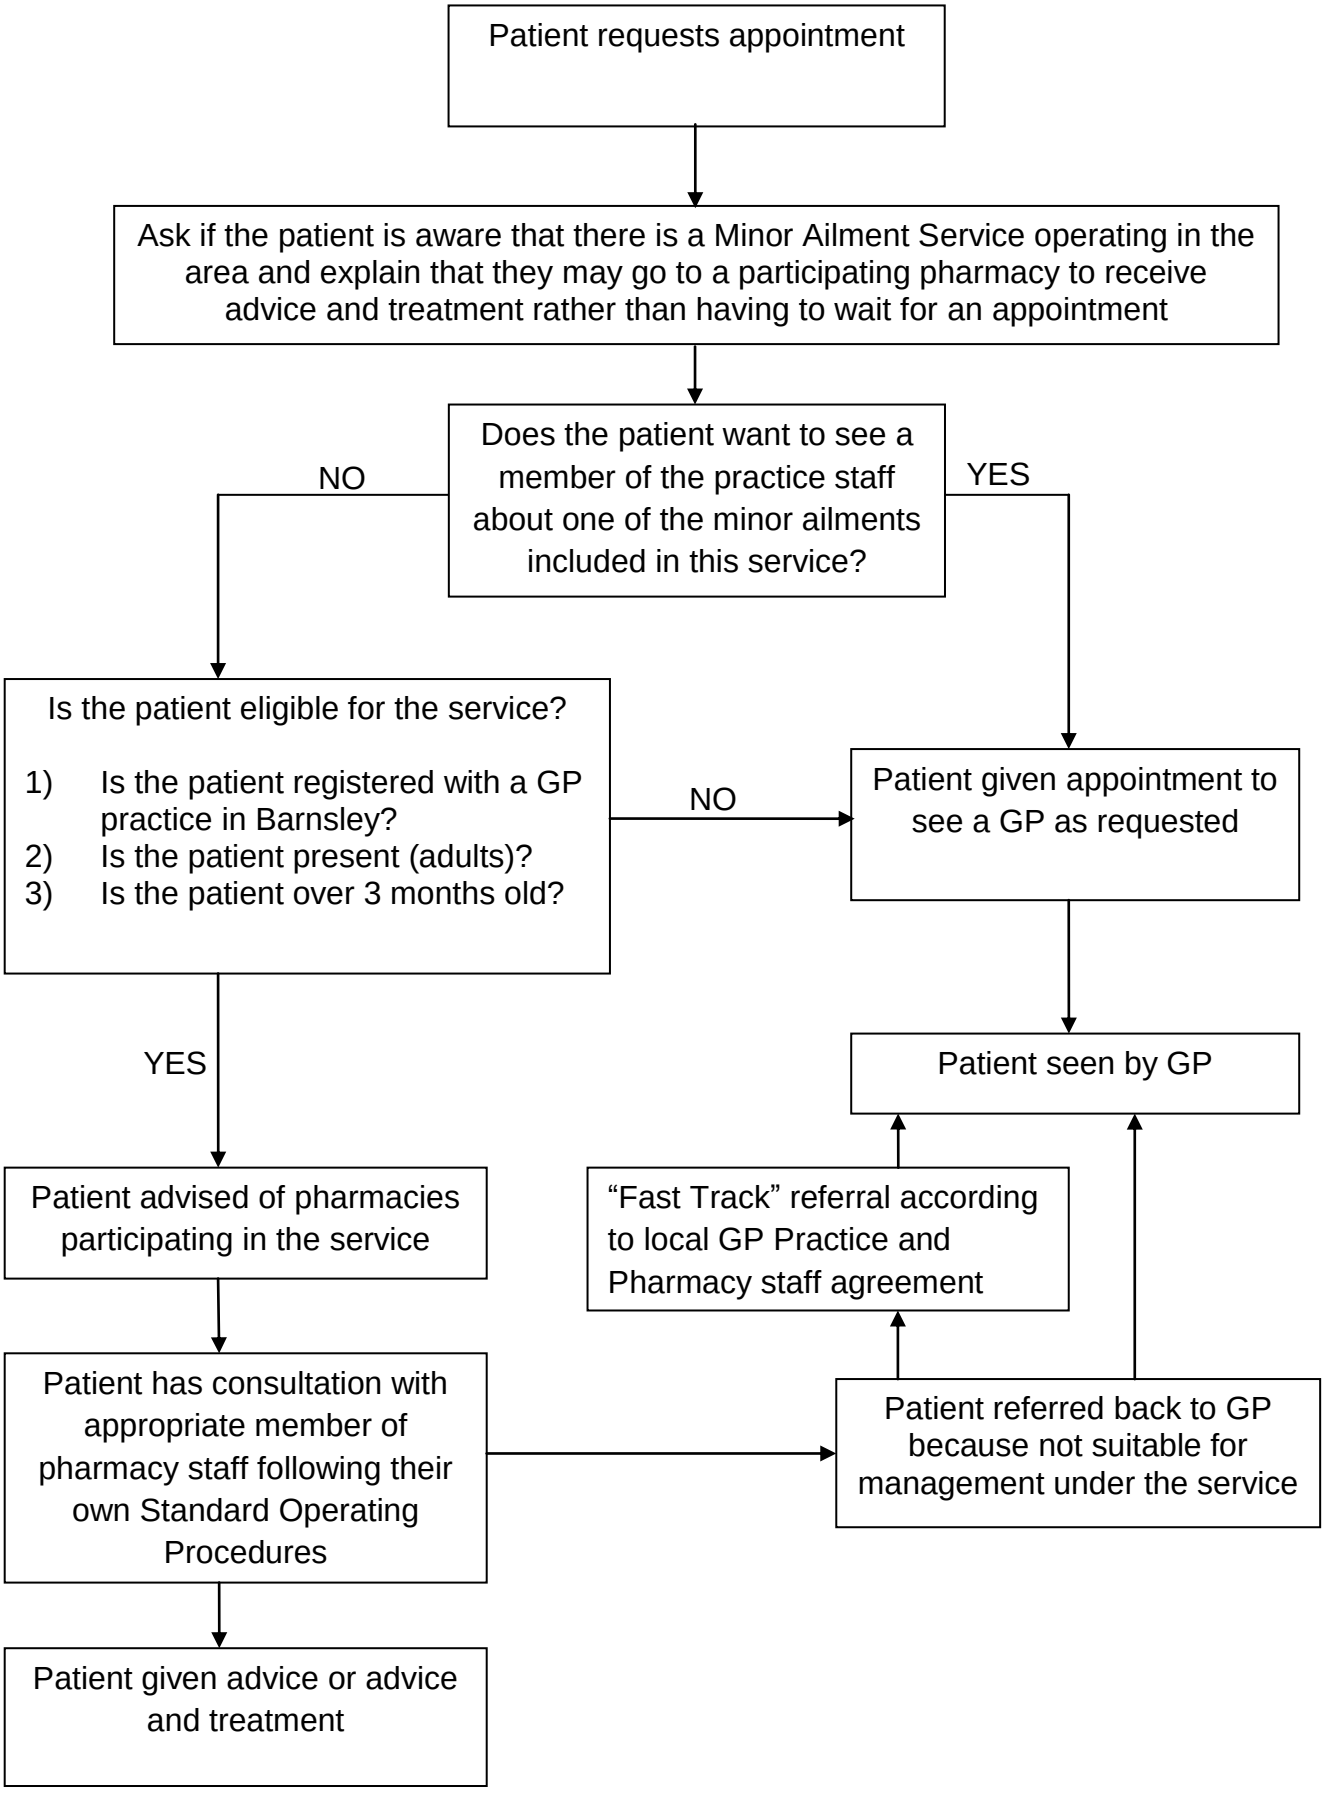

Practices and providers may wish to promote the service through a variety of means for example:

- Leaflets and posters – use NHS Barnsley CCG endorsed material only
- Recording a message on the telephone system
- Displaying a message on electronic notice systems

Whichever way the service is promoted, consideration should be given to ensure that patients are given appropriate information and appropriate direction to the service which will most suitably meet their need.

Please contact NHS Barnsley CCG if you have any queries.

Section 9 GP Referral Flow Chart

Section 10 Frequently Asked Questions

Q Where can patients find out about the scheme.

A range of publicity materials are being rolled out and activities to publicise the scheme will be on-going. A complete list of the conditions covered and other details can be found at: www.barnsleyccg.nhs.uk.

Q. Who can use this service?

Any patient registered with a GP in Barnsley.
Patients are expected to attend the pharmacy in person. In the case of a child under 12 years of age a parent, guardian or carer must be in attendance, but the child being treated need not be present.
Children below the age of 3 months are not generally considered suitable to be included in the scheme.

Q. How long is treatment intended?

The conditions covered by the scheme are in the main minor and self-limiting. Treatment provided is intended to cover the period of time a person may be affected by the condition. Medication is not to be provided with the intention of allowing a person to build stock in case of suffering particular symptoms or for example when the:

- Medicine is requested due to loss of a supply of medicine
- Medicine is requested 'just in case'
- Medicine is requested to take abroad
- Medicine is requested to stock up medicine cabinet
- Medicine is requested in lieu of repeat prescription

Medication intended for the treatment of chronic conditions e.g. paracetamol for chronic pain, must remain to be managed by their own General Practitioner. The pharmacy can support the prescriber to use Repeat Dispensing, Electronic Prescribing and other such initiatives to achieve this.

Q. What medicines can be used to treat which ailments?

The list of medicines and ailments are detailed in the formulary for the scheme found in section 11. No other ailment is treatable through the scheme even if a suitable medication is available for another condition. If you feel that a particular condition or medication should be considered feel free to contact me. The formulary is subject to constant review and so may change from time to time.
A complete list of the conditions covered and other details can be found at: www.barnsleyccg.nhs.uk.

Q. Are there any charges to the patient?

If a patient is exempt from NHS prescription charges, any medicine supplied under the scheme will be free. Patients may hold an exemption on the grounds of age, medical condition or because they are in the receipt of benefits. If a patient

purchases a pre-payment certificate they are likely to be suffering from a Long Term Condition and for this reason they may also receive the treatment free of charge.

If a patient usually pays a prescription charge then the medicine supplied should usually cost less than a charge and they may be offered it as an over the counter sale. Those who pay for their prescriptions will however benefit from the written advice pharmacies are obliged to provide if the patient is to be included within the scheme.

Q. Can patients demand the medicines available for the conditions treatable?

Pharmacists should use their professional discretion to decide whether medication is required and the most appropriate product to supply if a choice is available to them. There is no obligation to supply medication should it be considered inappropriate for a particular patient or when a patient presents with symptoms which are not indicative of any of the minor ailments included in the scheme.

Q. How much will pharmacists be paid?

Payment will be £4.17 per consultation that results in advice and written information being provided. Reimbursement for the supply of medication from the minor ailments formulary will be based on an agreed price. Packs supplied by the pharmacy must be a suitable "over the counter" pack with the corresponding product information licenses and product license. For this reason they cost slightly more than the equivalent Drug Tariff price, as opposed to prescribed medication, medication supplied under the scheme attracts VAT.

Q. Where are the Patient Information Leaflets which support the scheme obtained?

The relevant information leaflet(s) should be downloaded and printed by the pharmacy from www.patient.co.uk.

Q. What additional training are participating pharmacists and their staff expected to undertake to provide the service?

There is no prerequisite for Pharmacists or Technicians to undertake any particular training however there are three Centre for Postgraduate Pharmacy Education open learning programmes relating to the development and delivery of Minor Ailments Services:

- Minor Ailments Services: A starting point for pharmacists
- Minor Ailments Services: Pharmacy technicians - leading the way
- Responding to Minor Ailments

Other training courses that deliver the equivalent knowledge and learning outcomes may be accessed to ensure the competence of staff involved in the scheme.

Pharmacists and staff involved in the provision of the service are expected to demonstrate an appropriate level of knowledge and competency. They should already operate under Standard Operating Procedures and Clinical Governance standards in order to sell the products included in the scheme.

Section 11 Minor Ailment Scheme Formulary (by Condition)

Products can be used for any of their licensed indications at licensed doses. The pharmacist is professionally accountable for the treatment decisions made.

Suggested information leaflets are listed at www.patient.co.uk . Pharmacists can provide an alternative leaflet if they deem that it is more relevant.

Condition	Formulary	Information sheet
Allergic conjunctivitis	Sodium Cromoglicate 2% eye drops	Allergic conjunctivitis
Allergic rhinitis, Hay fever	Loratidine 10mg tablets Loratidine 5mg/5ml syrup Cetirizine 10mg tablets Cetirizine 5mg/5ml solution Chlorphenamine 4mg tablets Chlorphenamine 2mg/5ml syrup Beclometasone Nasal Spray	Hayfever House Dust Mite and Pet Allergy Allergy - General Overview
